

31 January 2018

Organisers:

Role of Cyber Security and Introduction of Shield

Increasingly, more and more computer systems in Hong Kong are under cyber-attacks. Due to the lack of effective detection, trace back and analysis capabilities for these cyber-attacks in Hong Kong, the incident response is usually slow, reactive and ineffective. The SHIELD is the perfect solution for SMEs looking for hassle free DDoS protection solution. The Smartbox SHIELD is built to perform intelligent packet filtering in order to protect the clients against DDoS attack and ensure their business are not being impacted.

CISC is working with Cyberport to provide free trial of SHIELD for tenants of the Cyberport FinTech Center which is one of the largest innovation and technology co-working spaces in Hong Kong. After this large-scale trial, CISC Limited, the research-based spin-off of the CISC research lab, targets to launch the SHIELD to the commercial market by end of 2018.

You are cordially invited to join us at the seminar with the below details:

Date: 6 February 2018 (Tue)

Time: 10:00 am - 11:00 am

Venue: Multi-function Room, 4/F, Smart-Space FinTech, Core E, Cyberport 3
